Journal Club on the theme:

The self-care of oral anticancer agent index (SCOAAI)

Abstract:

In the last two decades, the use of oral anticancer agents (OAAs) has increased due to the growing number of patients diagnosed with cancer. Although patients prefer OAAs to traditional therapies, this regimen is often associated with poorer adherence. Furthermore, patients must perform several self-care behaviours to maintain good health and avoid complications. Not all these essential self-care behaviours are considered in the existing tools, focusing mainly on monitoring and management. Therefore, "The self-care of oral anticancer agent index (SCOAAI)" has been developed to measure all self-care dimensions.

Speaker

Dott.ssa Eleonora Monaco

RN, MSc student

Moderator

Dott. Matteo Martinato

RN, MSc, PhD,

Research Fellow in Nursing Sciences

The author of the article will be present

Dott.ssa Federica Lacarbonara

RN, MSc, PhD student

Didactical Tutor at Azienda Ospedale - Università Padova
