

CAVEAT

A multicenter prospective registry for the coronary access
after TAVI

696 enrolled patients

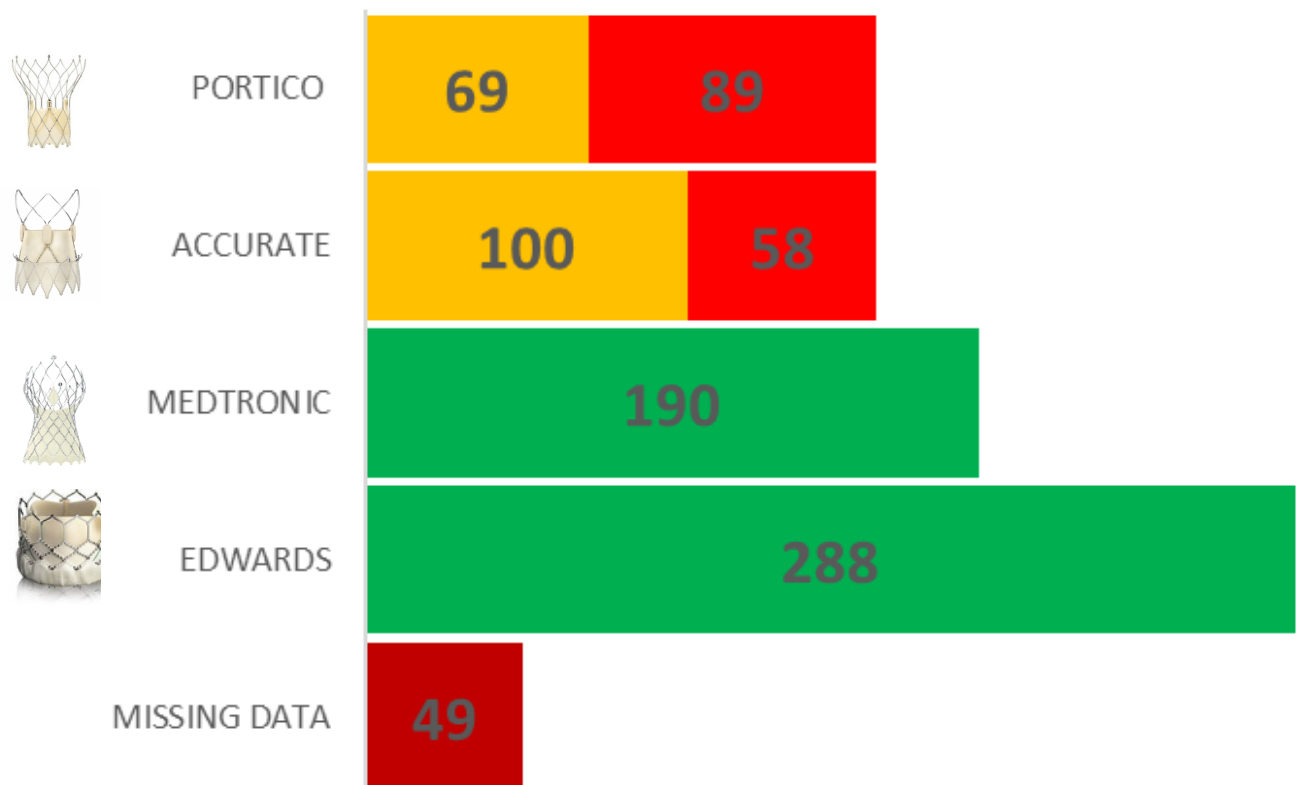

Please be advised that the REDCap project is currently offline as we are in the process of upgrading the software to the latest version. We apologize for any inconvenience this may cause and would like to assure you that we are working to restore access as soon as possible. We will keep you updated on the progress and let you know as soon as the project becomes available again. Thank you for your understanding.

Thanking all the centres that are actively enrolling, we ask you to make one last effort! In particular, we recommend that you enroll patients treated with self-expanding implants, who are currently slightly underrepresented in the register compared to the expected sample size for the subgroups (158 patients for each group of valves)

You can see below how many valves have been implanted until today.
