University of Padova*

Abstract

The lecture on “Statistics in surgical oncology” introduces the statistical approach and methods used in cancer and surgery studies. The lecture will cover the main themes of surgical oncology, such as genomics of oncology, analytical tools to assess the risk to develop cancer, to estimate the prognosis and the survival of these patients, and to analyze the quality of life of the patients. Furthermore, the discussion will be characterized by an in-depth analysis of the application of statistical methods covered with an overview of the real study case and published studies in surgical oncology.
